

BIRNS, INC. CELEBRATES 65TH ANNIVERSARY

In 1954, exploration in the subsea industry was in its relative infancy. In fact, some of the very first unmanned submersibles were introduced in the 1950s. Nearly seven decades later, depth ratings for subsea systems have exponentially changed, and connectivity solutions for today's subsea systems are extremely advanced and complex. BIRNS has been proud to have played a role in the advancement of high performance lighting and connector systems for the subsea market for the last 65 years.

Our company was born in Los Angeles, California, and quickly became known for contributing key technology to the marine and nuclear industries. Early marine market contributions included building specialty lights for the Sea Lab projects and illuminating the excavation of the Titanic. Expanding into the nuclear field in the 1980s, we soon introduced pivotal products to enhance the safety and capability of the nuclear field, like the world's most advanced seismically-qualified, nuclear-grade emergency light, and the BIRNS Corona™ floodlight with 130,000 lumens.

Throughout our [65 year history](#), we've been honored to help advance technology in these important and competitive markets. Our products have allowed faster communication and brighter illumination, both inside containment and at great oceanic depths, and we're excited about what advancements the future will bring!

BIRNS COMPLETES SUCCESSFUL ISO 9001:2015 AUDIT

We are proud to announce that our Quality Management System (QMS) recently had its successful ISO 9001:2015 audit carried out by DNV-GL, an accredited international certification body. During the audit, BIRNS' QMS was thoroughly evaluated to ensure proper implementation, procedure compliance and proof of continuous process improvements, including risk assessment and mitigation, as required by the Standard.

Our company first received ISO certification back in 2009, and has maintained it ever since; we became certified in 2018 to the rigorous requirements of the new 9001:2015 version of the Standard, and are proud of our latest successful audit.
