

## Before and After with the New BIRNS Lumena-6™ LED Floodlight

We love it when our products exceed customer expectations! Our new 85,000 lumen [BIRNS Lumena-6™](#) LED floodlight blazed like the sun, making a night and day difference in this reactor pool in California. The video above initially shows the pool with its existing 300W lights illuminated, and when we turned on the single BIRNS Lumena-6, the results spoke for themselves.

### Seamless Installation, Amazing Results

The new BIRNS Lumena-6 is simple to install, and users are thrilled with the elegant design—a powerful plug and play solution that offers flexibility and scalability. It includes an exclusive integrated onboard water cooled electronics enclosure, so a single mains power cable is all that's needed on the surface.

This high performance system provides high intensity, precision illumination to fuel pools, reactor pools and other key applications inside containment with an 80,000 hour lamp life and custom-engineered reflectors.
