

6,000M Open Face Rated

Coax Cable Assemblies

New solutions provide extraordinarily high quality signal transmission and pressure resistance

We are ending the year strong by adding impressive new meaning to our tagline of High Performance Under Pressure, with groundbreaking new capabilities for our lines of deep submergence RF connectors and cable assemblies.

Recent stringent testing has led to coax 1C contact configurations of the popular [BIRNS Millennium™ connector series](#) to receive certification to open face pressure to 6km. Stringent 40 cycle open face hydrostatic testing protocols yielded industry-leading insertion losses: at 8800 psi, losses of only -0.35dB at 3.0 GHz with a VSWR of 1.2.

AS9100:2016 Certification

More great news: our Quality Management System (QMS) has been certified to [AS9100:2016 \(Rev. D\) by DNV](#). This acclaimed globally recognized standard serves the defense, aerospace and aviation industries, and demonstrates our ongoing deep commitment to outstanding quality and continuous improvements in its products and processes.

We' ve been proud to have been ISO 9001:2015 certified for years, and now in achieving the rigorous and demanding AS9100 accreditation, we are thrilled to demonstrate our efforts for excellence in every aspect of our organization. We believe that our continual investment in such certifications, as well as expanding the scope of our QMS to include SUBSAFE, will demonstrate to our customers and industries that our advanced connector and lighting systems are reliable, safe and of the very highest quality, and made according to the highest and most exacting industry standards.
